Of the many speech and language problems that have been associated with cleft palate, the identification of perceptual and psycholinguistic disorders is an area of considerable research interest. This report reviews the parameters and procedures used in studies investigating speech production in men with cleft palate. Fifteen studies were reviewed, ranging from case descriptions and descriptions of clinical findings to cross-sectional and longitudinal studies of speech production. The findings of the studies were summarized according to methodology and cleft type. The majority of the studies were longitudinal and included a treatment group. These were characterized as being behavioral in nature. The evidence supports the presence of speech disorders in men with cleft palate. However, in most studies, no direct comparisons were made between cleft-conditioned and normal groups, and thus we were unable to determine the level of impairment for specific speech disorders. Further, the definition of impairment varies among studies, making comparisons difficult. Finally, in studies that compared the speech of men with cleft palate with normal speech, several speech disorders were not reported.Q: Hiding the contents of a certain element with jQuery I am trying to hide the contents of an element with this function: $('#rating').on('click', function() { var rating = $('#rating').html(); $('#review').hide(); $('#' + rating).show(); }); The problem is, when I use the function, I don't see any changes.

The new snap to scale mechanism allows you to scale the entire or part of the drawing and snaps to objects that are easier to identify, such as text. You can also now snap to extended objects and all the way to the drawing canvas to more quickly extend objects or stretch layouts in the drawing. (video: 1:50 min.) Expanded Outliner capabilities: The new Outliner can now hold a much larger number of items, has the ability to add both objects and views to it, and can easily hold parts of an entire drawing. The Outliner can also display and view all subtasks and parts in the entire drawing, with just a few clicks. (video: 1:58 min.) Data Interpolation: You can now more easily create smooth and seamless 3D drawings from 2D objects. A new "Data Interpolation" command automatically produces 3D objects from 2D objects, such as text boxes or splines. (video: 2:12 min.) Powerful 2D curve editor: Use the new 2D curve editor to create 2D curves of any shape, including arbitrary polygonal curves, tessellated curves, and seamless closed paths. You can then easily adjust the shape of the curve and dynamically add new shapes to the curve. You can even export your work as an image file. (video: 2:18 min.) Aspect ratio indicators for images: The new image editing and measurement tools have aspect ratio indicators to help ensure that the photo or graphic you are using can be correctly used in the
